**Two Step Announces Hosting Service for Corporate Focus
Entity, Ownership and Minute Book Software**

***Web-Based Service Provides Fast and Easy Start Up for
Mid-Size Law Firms and Corporate Legal Departments***

August 9, 2005, Waltham, MA—Two Step Software, Inc., the leader in corporate governance, ownership and minute book management software, announces its new Corporate Focus™ Hosting Service which makes the database application immediately available over the internet from Two Step's managed hosting facility. The hosting service helps customers get started fast and easily since Two Step handles the complete system configuration and customer support. The service offers a new option for current customers or prospective customers that want to avoid some of the technical issues associated with the traditional self-hosted configuration.

Customers may now choose the best technological arrangement for their own situation by either installing Corporate Focus on their own internal systems or using it hosted by Two Step. Either way, customers get the same powerful functionality that has become the de facto standard for the nation's leading law firms and their clients. With the Corporate Focus Hosting Service, Two Step takes care of the installation, administration and support requirements. The system has been installed at one of North America's leading managed-hosting facilities. All of the necessary hardware and database and server software, as well as the required end user licenses, are provided. Two Step also takes care of the administrative issues, such as user access, security, and regular data backups.

"We wanted to offer the same software application that has been used for the past decade by the nation's largest law firms and legal departments to mid-size law firms and smaller legal departments. Clients are demanding access to their corporate governance and capitalization information without regard to the size of their law firm," said Gary D. Levine, President and Founder of Two Step Software. "We've tried to remove the biggest hurdles which have been the initial capital investment and the requisite level of support services. Mid-size law firms and smaller legal departments may not have the internal expertise or the available systems, but still have significant entity and ownership tracking needs."

Two Step customers that choose the hosting service receive the protection of a world-class, managed-hosting infrastructure, including physical security, such as traditional locks, personnel access controls, and video and biometric surveillance systems. Other protections include a robust fire suppression system, HVAC and multiple power feeds, redundant internet connectivity, hot-swappable servers and routers, and on-site inventories of replacement equipment to ensure maximum uptime. System access is controlled by user authentication, 128-bit SSL encryption, state-of-the-art firewalls, and technicians who monitor on a 24/7 schedule to safeguard the system.

Corporate Focus is now available either for self-hosted installation or from Two Step's hosting facility. Support services include toll-free telephone and email customer support, web-based remote technical support, a customer support web site, and online training classes with a live instructor.
